

IECA Webinar Outline

CASE STUDIES AND LESSONS LEARNED USING THREE DIMENSIONAL STABILIZATION

Instructor: Mike Everhart, E. J. Prescott, Inc.

Date: Thursday, November 19 2020 | 9:00 – 10:00AM Eastern Time

This presentation will cover three case studies, we will review the specific site challenges that were encountered, how we utilized three dimensional stabilization solutions that were specified, and the final results. All three of these case studies will show how three dimensional or cellular confinement was used in different ways for different functions. The presentation will also examine adjustments made and lessons learned during the long construction process. As the presenter was directly involved in the project from design to completion, attendees can expect be presented with a first-person view of three challenging sites throughout New England.

Learning Objectives:

1. To have a clear understanding on what Three Dimensional Stabilization is.
2. To learn how to select the correct system for your project.
3. They will learn the multiple applications for the use of a Three Dimensional System.

Professional Development Hour Credit: 1 PDH

RCEP Delivery Method Type: Distance Learning – Synchronous (IECA Webinar)

Category of the Activity: (1) Core Technical Content
